SUMMARY

IT Specialist in endpoint and identity administration with Microsoft Intune, Entra ID, and Microsoft 365, plus tier 1 and tier 2 support. I build the internal tools and procedures that keep IT work consistent, including a full in-house help desk app. Studying Computer Engineering and preparing for the CCNA, working toward systems administration, networking, or cloud.

EXPERIENCE

IT Specialist · MR2 Solutions, subcontracted to McKenna Labs — Jan 2026 to present

- Manage the Windows 11 fleet in Intune and Autopilot: MDM enrollment, compliance policies, and Win32 app deployment.
- Administer Entra ID and hybrid Active Directory: user access, UPN conflicts, and Entra Connect sync troubleshooting.
- Enrolled devices that were joined to the directory but missing from Intune, and wrote a custom compliance detection script for our third-party antivirus, so compliance reports are now accurate.
- Handle tier 1 and tier 2 tickets for accounts, email, endpoint security, and warehouse hardware.
- Wrote the SOP library for device deployment, hardware registration, and warehouse device refresh, generated with Python.
- Defined a five-category hardware standard and presented a costed refresh proposal to finance. Approved and budgeted.
- Build internal tools that replace paper checklists and email threads with tracked records, starting with a Microsoft 365 help desk on Power Automate, SharePoint Lists, and Teams cards (see Projects).

IT Fundamentals Intern · Voit Real Estate Services — Summer 2025

- Mapped a corporate network and IP plan, and worked with Active Directory groups, Group Policy, file sharing, and ACLs.

Sales Associate, Build Your Own department · Micro Center, Tustin — 2020 to 2026

- Specced, built, and repaired custom PCs daily, and diagnosed hardware and OS issues with component-level troubleshooting.
- Advised customers of every skill level on compatibility, upgrade paths, and maintenance. Started in customer service in 2020.

PROJECTS

InH-Ticketing
work, in pilot

In-house help desk app. Staff sign in with Microsoft 365 and send requests to IT, Mechanics, or Cleaning. Each team works its own queue, and replies go out and come back by email through Microsoft Graph. Password check with an audit trail, admin reports, and 350+ automated tests. Django, PostgreSQL, Docker. Built with Claude Code.

Internal IT tools
work

Three single-file web tools that replaced paper and spreadsheets: Deployment checklist with a built-in device log, Purchasing & Inventory, and Printer Manifest.

Homelab
personal

Proxmox VE mini PC running Debian LXC containers for DNS filtering, a file vault, game servers, and a Linux lab. Management only through Tailscale with MFA, plus CrowdSec, Fail2ban, and a host firewall.

Claude Code mods
open source, MIT

Six add-ons on GitHub, including secret-guard, which blocks keys and passwords before they reach files or commits.

SKILLS

Identity and endpoint	Entra ID, Active Directory, Intune, Autopilot, Win32 app packaging, Conditional Access, Group Policy
Microsoft 365	Exchange Online, Microsoft 365 administration, SharePoint, Teams, Power Automate, licensing
Security	Xcitium Endpoint Manager, Microsoft Defender, Defender for Cloud Apps, BitLocker, web filtering
Systems, scripting	Windows 11 and Server, Linux, Proxmox VE, networking, PowerShell, Python, HTML, JavaScript

EDUCATION AND CERTIFICATIONS

Associate's, Computer Engineering · Santa Ana College — Expected May 2028

Cisco CCNA 200-301 · studying — Targeting early 2027

IBM cybersecurity certificates — 2025

IT Fundamentals for Cybersecurity; Cybersecurity Compliance Framework, Standards and Regulations; Introduction to Cybersecurity Tools and Cyberattacks; Operating Systems Overview, Administration, and Security
